4.18 TCG PrimePlex PRI Service (Cont'd.)4.18.2 Regulations (Cont'd.)E) Features

The following standard features are available with PrimePlex PRI:

- 1) Backup D Channel: Automatically takes over for a failed D channel in case of trouble. This is purchased as part of a 23B+Backup D PRI Arrangement.
- 2) Call-by-Call Service Selection (CBC): Provides an option to the Dedicated B Channel Configuration allowing B channels to be configured to access multiple services on a per-call basis. With this optional feature, separate facilities are not needed for individual services such as DID, DOD, and business dial tone lines. The customer premises equipment signals the local serving central office as to what type of service to access for each call.
- 3) Calling Party Number (CPN): Allows the user to have access to the directory number of the calling party. Provision of per-call and line blocking capabilities is a function of the customer premises equipment and is the responsibility of the customer.
- 4) Multiple Facility Signaling Control: Allows the D channel of one PRI Arrangement to provide signaling for up to 20 PRIs terminating on a switch module. Requires Backup D channel.
- 5) Original Called Number (OCN): which must be ordered for specific PRI ISDN trunks, places the callers original dialed digits into the OCN field of the selected ISDN message, for inbound calls which have been forwarded one or more times. These ISDN messages, containing OCN information, will be transmitted over the designed Data-Channels (D-Channels, primary, secondary, and back-up) on the ISDN trunk.
- 6) 2 B-Channel transfer on PRI: allows a controller that is interfaced over an ISDN PRI to initiate the transfer of one of its calls to another call so that the two end-users are connected to each other within the switch and the two PRI B-channels to the controller are released.
- 7) Caller ID With Name: this feature permits the display of a listed name associated with a telephone number from which the call is being made. The name and number will be delivered to a Customer-provided display device.

\* Caller ID is available with the following blocking options:

Selective Blocking - is designed to allow the customer the option to block delivery of their telephone number on a per call basis. Customers may control the delivery of their telephone number by dialing \*67 (1167 on rotary dial phones) before dialing the telephone number they are calling. Blocking does not work when dialing 800/888 and 900 services and 911 emergency services.

Complete Blocking - will automatically block a calling party's telephone number from being transmitted on all calls. However, the calling party can choose to override Complete Blocking and transmit their number on selected calls by pressing \*82 (1182 rotary phones) before dialing the number. Blocking does not work when dialing 800/888 and 900 services and 911 emergency services.

Caller ID With Name - this feature permits the display of a listed name associated with a telephone number from which the call is being made. The name and number will be delivered to a Customer-provided display device.
